Towers, Tunnels and Turrets

Castles

A castle is a structure that was built to protect the people who lived inside from their enemies. Most castles were built hundreds of years ago. They were usually built high up on a hill so that people could see if their enemies were coming.

The first castles were made from wood but these were easy to burn down.

Later castles were built using stone so they were stronger and harder to attack.

Famous castles in the UK

The United Kingdom has many significant castles.

Parts of a castle

- 1 keep
- 4 curtain wall
- **2** motte **3** bailey

5 gatehouse

Jobs in a castle

- **1843** People walked under the River Thames for the first time when the Thames Tunnel opened.
- **1854** Travellers used Paddington Railway Station in London for the first time.
- **1859** Isambard Kingdom Brunel died on 15th September, aged 53.

Bridges

A bridge is a structure built over a road, river or railway that allows people or vehicles to cross from one side to the other.

concrete road bridge

metal suspension bridge

stone railway bridge

rope footbridge

Tunnels

A tunnel structure is a long passage under the ground. Tunnels are usually built as a way of getting from one side of an obstacle to the other.

The Thames Tunnel under the River Thames in London allows people to walk under the river.
